

Founder/Startup Success Pattern Summary

The analysis of **117 Shark Tank India startup pitches** shows that **65 startups received investment**, while **52 startups did not receive a deal**. This gives an overall deal success rate of **55.56%**.

Among the startups that received deals:

- **43 startups (36.75% of all pitches)** received investment from **multiple sharks**.
- **22 startups (18.80% of all pitches)** received investment from a **single shark**.
- The dataset therefore shows that **multiple-shark deals were more common than single-shark deals** among successful pitches.
- The **average deal amount** among startups receiving investment was **56.03**, while the **largest recorded deal** was **150.00**.
- The **Technology & Digital** category had the largest number of startups and the highest total recorded investment, suggesting strong representation of technology-oriented businesses in the dataset.
- **Food & Beverage** was another major category, with a substantial number of startups and recorded investments.

Conclusion

The success pattern indicates that receiving a deal was relatively common in the analyzed pitches, with 55.56% of startups securing investment. Multiple-shark investments represented a larger share of successful deals than single-shark investments. However, the available dataset does not include founder-level characteristics, so conclusions about whether founder age, gender, education, or experience influenced success cannot be made.
